

Aquatic Ecology

Aquatic Ecology

An aquatic ecosystem is an ecosystem in a body of water. Communities of organisms that are dependent on each other and on their environment live in aquatic ecosystems. The two main types of aquatic ecosystems are marine ecosystems and freshwater ecosystems.

Marine biology is the scientific study of marine life, organisms in the sea. Given that in biology many phyla, families and genera have some species that live in the sea and others that live on land, marine biology classifies species based on the environment rather than on taxonomy.. A large proportion of all life on Earth lives in the ocean. The exact size of this large proportion is unknown ...

To streamline the environmental permitting process, multiple regulatory agencies joined forces to create one application that people can use to apply for more than one permit at a time - called the Joint Aquatic Resources Permit Application (JARPA). Local, state and federal agencies work with the Governor's Office for Regulatory Innovation and Assistance to update and maintain the Joint ...

One-Stop JARPA Resource Center

A leading journal in its field, AME covers all aspects of aquatic microbial dynamics, in particular viruses, prokaryotes and eukaryotes -- planktonic and benthic, autotrophic and heterotrophic -- in marine, limnetic and brackish habitats.

On a recent fossil collecting trip a friend asked, "What do you think is the most important organism on the Earth?" She knew full well I would answer, "Humans!" since we are the masters of our domain and without rival in the animal world (are we good or what?).

The Most Important Organism? | Ecology Global Network

Water on the Web was funded by the National Science Foundation from 1997 to 2005.: WOW is now in a 'maintenance mode'. We are no longer actively developing new materials, but we continue to seek opportunities to expand the site to new areas and we welcome collaborators that wish to contribute data or materials to the site.

Water on the Web

Wastewater contains valuable resources. However, because existing wastewater management systems have been designed primarily for pollution control and hygiene, the recovery of resources from wastewater is cumbersome.
