

Breakwater

Breakwater

Breakwaters reduce the intensity of wave action in inshore waters and thereby reduce coastal erosion or provide safe harbourage. Breakwaters may also be small structures designed to protect a gently sloping beach and placed 100–300 feet (30–90 m) offshore in relatively shallow water.. An anchorage is only safe if ships anchored there are protected from the force of high winds and powerful ...

Breakwater (structure) - Wikipedia
