Child and adolescent psychiatry or pediatric psychiatry is a branch of psychiatry that focuses on the diagnosis, treatment, and prevention of mental disorders in children, adolescents, and their families. It investigates the biopsychosocial factors that influence the development and course of these psychiatric disorders and treatment responses to various interventions.

Pediatric Acute-onset Neuropsychiatric Syndrome (PANS) is a clinical diagnosis given to children who have a dramatic – sometimes overnight – onset of neuropsychiatric symptoms including obsessions/compulsions or food restriction. They are often diagnosed with obsessive-compulsive disorder (OCD) or an eating disorder, but the sudden onset of symptoms separates PANS from these other disorders.

Indications. ADHD diagnosis and stimulant medication prescription have steadily increased over time. 7 – 9 The AAP and the American Academy of Child and Adolescent Psychiatry (AACAP) practice guidelines endorse stimulant medications, methylphenidate and amphetamine, as first-line treatment 10 – 12 (see Table 1 for effect sizes). Recommendations are robustly evidence based.
