Developmental psychology is the scientific study of how and why human beings change over the course of their life. Originally concerned with infants and children, the field has expanded to include adolescence, adult development, aging, and the entire lifespan. Developmental psychologists aim to explain how thinking, feeling, and behaviors change throughout life.

Essential thrombocythemia (ET) is a rare chronic blood condition characterised by the overproduction of platelets (thrombocytes) by megakaryocytes in the bone marrow. It may, albeit rarely, develop into acute myeloid leukemia or myelofibrosis. It is one of four myeloproliferative neoplasms (blood disorders that occur when the body makes too many white or red blood cells, or platelets).

Introduction. Eukaryotic lifespans range from days to centuries. Across this spectrum, the progression of aging can be slowed by dietary restriction (DR), the reduction of food intake without malnutrition (Fontana and Partridge, 2015, Kapahi et al., 2017, Kenyon, 2010). When food is freely available, lifespan can be extended by decreasing the activity of mechanisms that promote growth.

3.2. Curcumin appears not to extend the lifespan of wild-type C. elegans through its antimicrobial
properties. One contributor to late-age mortality in C. elegans is the harmful effect of proliferating bacteria that produce deleterious metabolites (Garigan et al., 2002, Gems and Riddle, 2000, Lithgow, 2003). To evaluate whether the lifespan extension by curcumin was mediated by the suppression ...
