Green Manure Cover Crop Systems

In agriculture, green manure is created by leaving uprooted or sown crop parts to wither on a field so that they serve as a mulch and soil amendment. The plants used for green manure are often cover crops grown primarily for this purpose. Typically, they are ploughed under and incorporated into the soil while green or shortly after flowering. Green manure is commonly associated with organic ...

Green manure - Wikipedia

A cover crop is planted to manage soil erosion, soil fertility, soil quality, water, weeds, pests, diseases, biodiversity and wildlife in an agroecosystem—an ecological system managed and shaped by humans. Cover crops may be an off-season crop planted after harvesting the cash crop. The cover crop may grow over winter.

Cover crop - Wikipedia

Johnny's offers the convenience of precombined crop mixtures for both spring and fall planting. These mixes can be used as a green manure incorporated into the soil or to provide winter erosion control.

1. Introduction. Agricultural production systems undergo rapid changes in response to shifts in production expenses, consumer demands, and increasing concerns for food safety, security, and environmental impact (Hanson et al., 2008, Hendrickson et al., 2008). An overriding concern is the need to develop sustainable production systems that address societal concerns for environmental impacts and ...

Policies, institutions and public goods. Structural adjustment programmes have been implemented in many countries in the region. Whilst these programmes have conferred macroeconomic stability on many economies, farmers have faced declining terms of trade and poorer access to many agricultural inputs such as improved seed and agro-chemicals, as well as lower and more uncertain grain prices.
