

Horses Biology Domestication And Human Interactions

Horses Biology Domestication And Human

Background. The date of the domestication of the horse depends to some degree upon the definition of "domestication". Some zoologists define "domestication" as human control over breeding, which can be detected in ancient skeletal samples by changes in the size and variability of ancient horse populations.

Domestication of the horse - Wikipedia

The horse (*Equus ferus caballus*) is one of two extant subspecies of *Equus ferus*. It is an odd-toed ungulate mammal belonging to the taxonomic family Equidae. The horse has evolved over the past 45 to 55 million years from a small multi-toed creature, *Eohippus*, into the large, single-toed animal of today. Humans began domesticating horses around 4000 BC, and their domestication is believed to have ...

158 *Human Ecology Review*, Vol. 14, No. 2, 2007 thesis is the idea that, "History followed different courses for different peoples because of differences among peoples' environments, not because of biological differences among peo-

Diamond in the Rough: Reflections on Guns, Germs, and Steel

Pleistocene Horses of North America. The Pleistocene epoch occurred 1.8 million to 10,000 years ago. It is often called the "Ice Age" because several different glaciations occurred during its time, each separated by warmer "interglacial periods."

Evolution of Horses, page 2. - ECOLOGY.INFO

La domestication d'une espèce, animale ou végétale, est l'acquisition, la perte ou le développement de caractères morphologiques, physiologiques ou comportementaux nouveaux et héréditaires, résultant d'une interaction prolongée, d'un contrôle voire d'une sélection délibérée de la part des communautés humaines. Elle se traduit par une modification plus ou moins profonde du ...

Domestication — Wikipédia

La domestication du cheval n'est pas la première réalisée par l'homme, celle-ci intervenant plus tard que chez le chien, le mouton, l'âne, le porc ou encore le bœuf [9]. Une opinion populaire tend à la placer dans un foyer unique des steppes d'Asie centrale il y a 10 000 ans. Elle est

vraisement plus tardive, et issue de différents foyers [10].

An epilogue, "The future of human history as a science", proposes extending the approach of Guns, Germs and Steel to smaller geographic and shorter time scales. Diamond suggests geographical fragmentation (producing the "right" amount of political unity) as an explanation for why, within Eurasia, it was Europe rather than China that eventually took the lead in technological innovation.

Guns, Germs and Steel: The Fates of Human Societies (Jared ...

Human evolution is the evolutionary process that led to the emergence of anatomically modern humans, beginning with the evolutionary history of primates—in particular genus *Homo*—and leading to the emergence of *Homo sapiens* as a distinct species of the hominid family, the great apes. This process involved the gradual development of traits such as human bipedalism and language, as well as ...

Human evolution - Wikipedia

"Fascinating.... Lays a foundation for understanding human history."—Bill Gates. In this "artful, informative, and delightful" (William H. McNeill, *New York Review of Books*) book, Jared Diamond convincingly argues that geographical and environmental factors shaped the modern world. Societies that had had a head start in food production advanced beyond the hunter-gatherer stage, and then ...
