"In our everyday garden grow the rosemary, juniper, ferns and plane trees, perfectly tangible and visible. For these plants that have an illusory relationship with us, which in no way alters their existentiality, we are merely an event, an accident, and our presence, which seems so solid, laden with gravity, is to them no more than a momentary void in motion through the air.

Forest gardening is a low-maintenance sustainable plant-based food production and agroforestry system based on woodland ecosystems, incorporating fruit and nut trees, shrubs, herbs, vines and perennial vegetables which have yields directly useful to humans. Making use of companion planting, these can be intermixed to grow in a succession of layers, to build a woodland habitat.
