Neutrophils (also known as neutrocytes) are the most abundant type of granulocytes and the most abundant (60% to 70%) type of white blood cells in most mammals. They form an essential part of the innate immune system. Their functions vary in different animals. They are formed from stem cells in the bone marrow and differentiated into subpopulations of neutrophil-killers and neutrophil-cagers.

Neutrophil - Wikipedia

History. Elsevier was founded in 1880 and adopted the name and logo from the Dutch publishing house Elzevir that was an inspiration and has no connection to the contemporary Elsevier. The Elzevir family operated as booksellers and publishers in the Netherlands; the founder, Lodewijk Elzevir (1542–1617), lived in Leiden and established the business in 1580.

Acute mesenteric ischemia (AMI) is a potentially fatal vascular emergency with overall mortality of 60% to 80%, 1-5 and its reported incidence is increasing. 3 Acute mesenteric ischemia comprises a group of pathophysiologic processes that have a common end point—bowel necrosis. The survival rate has not improved substantially during the past 70 years, and the major reason is the continued ...

Acute Mesenteric Ischemia: A Clinical Review ...

Choosing an antibacterial agent can be challenging, given the wide array of drugs available. Learning the important properties and uses of these drugs is made easier by the fact that they are grouped in classes based on their biochemical structure. Members of a drug class share characteristics such as clearance, mechanism of action, absorption, and side effects; knowing these shared properties ...
