Quick Changeover. Companies often take a narrow view of quick changeover as only the time required to pull off an existing tool or fixture and set the new tool or fixture. Actually we define changeover as the time between the last good piece from the last production or process run and the first good piece off the next run. When...

Single-minute exchange of die. It provides a rapid and efficient way of converting a manufacturing process from running the current product to running the next product. This rapid changeover is key to reducing production lot sizes and thereby improving flow ( Mura ), reducing production loss and output variability.

As Jim Jelinek, co-author of Quick Changeover Simplified: The Manager's Guide to Improving Profits with SMED was quoted as saying in IndustryWeek, "It is imperative that a company attempting to implement a quick setup and changeover program clearly articulate to the workforce what such a program means both to the company and to the employees.

### **How to Reduce Changeover Time and Increase Throughput**

SMED (Single-Minute Exchange of Dies) is a system for dramatically reducing the time it takes to complete equipment changeovers. The essence of the SMED system is to convert as many changeover steps as possible to "external" (performed while the equipment is running), and to simplify and streamline the remaining steps.

A Classic Quick Changeover Example. A perfect example of quick changeover is a pit-crew at a race track. How quickly the company gets the car in and out of the pit can mean the difference between winning and losing. Watch this video of a 1950 pit crew changeover vs a 2013 changeover. The 1950 changeover takes 67 seconds.

Brett Toberman, injection molding manager, said the company stands to save \$200,000 a year as a result of its setup reduction project with WMEP. "The ROI was substantial," he said, noting that the company got far more bang for its buck with the relatively low-tech project vs. high tech tools on the market.
