

## *Saving A Million Species Extinction Risk From Climate Change*

### **Saving A Million Species Extinction**

On the face of it, there are plenty of reasons why we shouldn't bother to save endangered species. The most obvious is the staggering cost involved.

### **BBC - Earth - What is the point of saving endangered species?**

Extinction: In biology, extinction is the dying out or extermination of a species. Extinction occurs when species are diminished because of environmental forces (natural or human-made) or because of evolutionary changes in their members. Learn more about mass extinctions and modern extinctions.

Just to illustrate the degree of biodiversity loss we're facing, let's take you through one scientific analysis... The rapid loss of species we are seeing today is estimated by experts to be between 1,000 and 10,000 times higher than the natural extinction rate.\*; These experts calculate that between 0.01 and 0.1% of all species will become extinct each year.

Act Now Save Animals Facing Extinction . Working together, we can win the race against extinction. We can save threatened animals! Join the campaign. Help get the word out.

### **Save Animals Facing Extinction - Act Now To Protect Wildlife**

Species extinction is the most obvious aspect of the loss of biodiversity. For example, species form the bulk of the examples in a comprehensive assessment of the state of the planet published in the early 21st century by the Millennium Ecosystem Assessment, an international effort coordinated by the United Nations Environment Programme. The subject of conservation is broader than this, however.

The dramatic growth of wind energy throughout much of the world is also taking a huge toll on bats. Scientists estimate that hundreds of thousands of bats are killed each year in the United States by collisions with the spinning blades of wind turbines or rapid pressure change at turbines that can rupture blood vessels.

Bees are extraordinary creatures that exist in all types of climates around the world, from forests in Europe to deserts in Africa, and even in the Arctic Circle.

### **Bees | Earth Day Network**

The Endangered Species Act (ESA), passed in 1973, was enacted to halt the rapid loss of plant and animal life. Frequently referred to as the “crown jewel” of our nation’s environmental laws, the ESA has been responsible for saving many species formerly on the brink of extinction, including the bald eagle, gray wolf and California sea otter.
