Therapeutic Agents Burger Medicinal Chemistry

The utilization of peptides as therapeutics has evolved over time and continues to evolve with changes in drug development and treatment paradigms ().Peptides isolated from natural sources, such as insulin and ACTH, provided life-saving medicines in the first half of the 20th century.

Therapeutic peptides: Historical perspectives, current ...

Along the years, VAs have gained a relevant role in the fight against cancer and have been shown to be particularly effective in the treatment of hematological and lymphatic neoplasms, as well as of solid tumors (i.e. breast cancer, non-small cell lung cancer).9, 10, 14 The antiproliferative cascade triggered by VAs at the molecular level is still clouded, albeit some experimental evidence ...

Vinca alkaloids and analogues as anti-cancer agents ...

By the late 17th and early 18th centuries, the digestion of meat by stomach secretions and the conversion of starch to sugars by plant extracts and saliva were known but the mechanisms by which these occurred had not been identified.. French chemist Anselme Payen was the first to discover an enzyme, diastase, in 1833. A few decades later, when studying the fermentation of sugar to alcohol by ...

Pregabalin, marketed under the brand name Lyrica among others, is a medication used to treat epilepsy, neuropathic pain, fibromyalgia, restless leg syndrome, and generalized anxiety disorder. Its use in epilepsy is as an add-on therapy for partial seizures. When used before surgery, it improves pain but results in greater sedation and visual disturbances.

Introduction. Since Flamm et al. (Flamm et al. 1978) first reported that cerebral ischemia might initiate a series of pathological free radical reactions within the cellular membranes of the central nervous system, the detrimental role of reactive oxygen species (ROS) in ischemic brain has been extensively discussed ().Once the brain becomes ischemic, energy generation is suppressed, intra ...

Some viruses, no matter how hard we try, remain resistant to vaccines. Now, researchers are using a different method, gene editing, as a way to make cells immune to mankind's most difficult viruses.. Led by Dr. Justin Taylor, a team at the Fred Hutchinson Cancer Research Center has targeted four infections for which there's no protective vaccine: HIV, influenza, the Epstein-Barr virus (EBV ...
