A nerve injury can result in weakness or paralysis of a muscle or in numbness of an area of skin. In some people, it also causes pain.

Nerve Injury - Center for Nerve Injury and Paralysis

Nerve injury is injury to nervous tissue. There is no single classification system that can describe all the many variations of nerve injury. In 1941, Seddon introduced a classification of nerve injuries based on three main types of nerve fiber injury and whether there is continuity of the nerve. Usually, however, (peripheral) nerve injury is classified in five stages, based on the extent of ...

Axillary nerve injury is characterised by trauma to the axillary nerve: from either a compressive force or a traction injury following anterior dislocation of the shoulder.[1][2][3][4] Axillary nerve injury referred to neuropathy of the axillary nerve. It describes a loss of movement and/or lack of sensation in the shoulder area of the body.

Axillary Nerve Injury - Physiopedia

The vagus nerve, also known as the 10th cranial nerve, stems from the brain and traverses through the neck, thorax, and abdomen. It has control of the trachea, heart rhythm, bronchi and the digestive tract when the body is at rest. Within the neck, the vagus nerve proceeds into the carotid sheath where it goes underneath the carotid artery and the jugular vein.
